Re: Technical Assistance Contract
Jackpile-Paguate Project

Dear Ron:

As we discussed during our meeting on December 21, 1984, the Pueblo requires additional technical support relative to ground water issues on the Jackpile-Paguate project. Seven options have been proposed to resolve the ground water issues and these options need to be evaluated by reclamation specialists and engineers and integrated with the overall reclamation alternatives.

Jacobs proposes to prepare a report which will evaluate the technical, economic and managerial feasibility of the various ground water mitigation options and provide a comparison of the advantages and disadvantages of each option. The report will enable the Pueblo to select the ground water mitigation option which is most advantageous to the Pueblo. The option selected will be incorporated into the Laguna Reclamation Plan.

The report will contain the following:

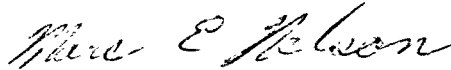

- o A brief description of the ground water issues.
- o A brief summary of the ground water reports that have been prepared on the project.
- o A description of the options for resolving the ground water issues.
- o An assessment of the feasibility of each option.
- o A description of the advantages and disadvantages of each option.
- o A comparison of the options that will enable the Pueblo to select the option that is most advantageous to the Pueblo.

o A summary of the report.

Jacobs can prepare a draft report, review the draft report with the Pueblo and prepare a final report for a fixed price of \$6,000.

If you have any questions concerning this proposal or require any modifications, please contact me. If you decide that this proposal meets the Pueblo's needs, we will be happy to prepare a modification to our existing contract to include the report described above.

Sincerely yours,

A handwritten signature in cursive script, appearing to read "Marc E. Nelson".

Marc E. Nelson,
Project Manager
